

# COVID-19 Support Services for Legal Counsel

Technical Clarity. Defensible Analysis.

In times of uncertainty, many clients turn to the legal community for advice on how their company should proceed in times of crisis. As a trusted partner to many law firms, Geosyntec offers assistance responding to the COVID-19 pandemic to protect human lives and minimize liability and business risks.

## What We Offer

Our senior staff includes engineers and scientists who are recognized authorities in their fields:

- **Microbiologists** who specialize in the detection, identification, root cause analysis of microbial growth, and mitigation of damages and exposure risks from bacteria and viruses, including pathogens such as *Bacillus anthracis* (causative agent of Anthrax) and *Legionella pneumophila* (causative agent of Legionnaires' disease), in natural and built environments
- **Analytical chemists** with specialized experience in the analysis of DNA and RNA of bacterial and viral pathogens
- **Certified safety professionals, virologists and certified industrial hygienists** with specific experience in disinfection protocols and workplace safety associated with pathogens, and development and implementation of business continuity and emergency response plans
- **Regulatory professionals** who can assist with obtaining temporary variances for environmental regulatory orders and development of evidence needed to support triggering the business income disruption insurance coverage as a result of the COVID-19 outbreak

Geosyntec provides specialized expertise necessary for attorneys to counsel their clients and advocate for client interests on a wide range of matters related to business transactions, environmental management, compliance and enforcement, toxic tort, and general litigation matters.

## About Geosyntec

With over 1,500 employees in 80+ locations in the US, Canada, UK, Ireland, and Australia, Geosyntec provides the engineering and science needed to respond to this pandemic.
